

Which of the following data models would MongoDB support for infobox data for http://en.wikipedia.org/wiki/Chevrolet_Corvette?

☒

```
{
  "manufacturer" : "Chevrolet",
  "name" : "Corvette",
  "layout" : { "engine" : "front",
               "bodyStyle" : "coupe",
               "seats" : 2}
}
```

☒

```
{
  "manufacturer" : ["Chevrolet", "General Motors"],
  "name" : "Corvette",
  "engine" : "front",
  "bodyStyle" : "coupe",
  "seats" : 2
}
```

☒

```
{
  "manufacturer" : "Chevrolet",
  "name" : "Corvette",
  "layouts" : [{"bodyStyle" : "coupe", "seats" : 2},
               {"bodyStyle" : "hardtop", "seats" : 2},
               {"bodyStyle" : "convertible", "seats" : 2}]
}
```

Thanks for completing that!

All of these are valid models for the infobox data! But it's also important to keep in mind that when you are designing your data collections, that you choose a schema that makes it easy to work with.

CLOSE

"General Motors"],
