A library has a database that holds information about each book, and a list of patrons who have currently checked it out.

On which 2 of the following fields should you run a crossfield constraint check and why?

Example entry:

```
{
  "id": 1942109,
  "title": "13 (Tallent & Lowery)",
  "author": "Amy Lignor",
  "tags_for_suggestions": ["sci-fi", "adventure", "conspiracy"],
  "copies_in_library": 3,
  "checked_out_by": ["patron1", "stu3", "ama"],
  "ASIN": "B00AG5G3VE"
}
```
